

## **Advanced Certificate in Web Programming with .Net Framework (ACWP)**

This certificate course is designed to develop participants' proficiencies in web Application development on .Net Framework. It introduces participants to variety of skills necessary to build dynamic web application software based on classic ASP.Net. On completion of the course, the participant will be expected to enter the job market as an enterprise web application developer, an application and computer programmer, client/server developer and/or database administrator. The course also serves as a foundation for ASP.Net certification programmes including Microsoft Certified Application Developer (MCAD) and Microsoft Certified Solutions Developer (MCSD). It consists of three subject areas:

1. Web Forms Design in ASP.Net
2. Programming in VB.Net or C#.Net
3. Connected and Disconnect Data Access Using ADO.Net and LINQ
4. Introduction Microsoft SQL Server Database Management

The training includes face-to-face interactions; and hands-on laboratory sessions on real-world applications.

Who should attend: Participants must have basic knowledge of:

- Microsoft Windows operating system and its core functionality.
- Computer Programming
- HTML or XHTML

Duration

- Day Session: 2 Weeks (10 days)
- Evening Session: 4 Weeks
- Weekend Session: 8 Saturdays
