

Certificate in ICT for Project Management (CIPM)

The course takes a hands-on approach for participants to learn how to apply relevant software/applications to project management. The specific modules are:

- Overview of ICT in Project Management
- Establishing a Project Using Microsoft Project
- Applying Microsoft Project for Updating Project Progress
- ICT Considerations in the Project Management Triangle
- Planning Tasks and Assigning Schedules with Microsoft Project
- Managing Project Performance Using Microsoft Project
- Fundamental Project Management Analysis with Electronic Spreadsheet
- Managing Resources and Finalizing Planning with Microsoft Project
- Project Reporting and Documentation with Microsoft Project
- Setting Baselines, Tracking Progress and Reporting

Who should attend:

This course is essential for anyone working in a project environment. Thus, it is designed to meet the needs of Project Managers, Business Analysts, Operation Managers, Team Leads, Product Managers, Marketing Managers, IT Managers, Data Analysts, PMO Managers/Directors, Project Schedulers and anyone who is connected to the project schedule. Participants should have a basic understanding of the principles of project management.

GIMPA School of Technology's courses are the best in Ghana because we have the most highly qualified faculty in the country (as compared with other schools offering such courses).
